

# An Interdisciplinary Study on IoT Devices for Children

David Yifu Lang

## SMART HOME SYSTEM

# Background

# End User Perception

- Often can be difficult for less technologically experienced users to understand the importance of following security standards
  - The most sophisticated security mechanisms are useless if they're not being employed
- Can be attributed to the lack of reinforcement learning in security
  - Positive reinforcement: good security practices → not being attacked
    - No direct reward for good practices
  - Negative reinforcement: bad security practices → *possible* breach of security
    - Possibility of no consequences for bad practices

# IoT Security Standards

"Dolphin" device emits ultrasonic sound  
undetectable by humans to activate VCA

# Amazon Echo Dot for Kids

- Amazon's child-friendly version of their smart home device
- Hardware is identical to the normal version; this product comes with an Alexa FreeTime subscription
  - Allows a user to enable FreeTime for certain devices, enabling child protection and filtering
  - Any Echo device can have FreeTime enabled

# ROYBI Robot

- Smart toy designed to teach children a variety of topics, such as STEM topics and language
- Includes facial recognition capabilities
- App provides statistics on child's learning experience and will make suggestions on what to improve
- App has access to the mic and camera of the device, available for streaming
  - App user can speak through the device as well

# Protecting Children

COPPA gives parents control over their child's data:

- What data is collected and how it is used
- Verifies parental consent
- Prohibits service from disclosing data to third parties, unless necessary
- View and delete collected data
- Prevent further use or collection of data
- Maintain the confidentiality, security, and integrity of the information
- Service retains information only for service use
- Collect no more than the necessary data for service

# High-level Goals

1. Develop a generalizable mental model of how parents understand cloud infrastructure and the IoT domain
2. Develop a threat model based on network analysis for possible attack vectors
3. Recommend security practices and mechanisms for safer IoT use

# Methodology

# End-User Study

# Privacy Policy Findings

## Amazon Echo Dot for Kids

- Records audio only when “wake word” is called
- Stored Amazon cloud services
- Application collects personal information, but Amazon will not sell to third-parties
  - Name, birthdate, contact info, voice, location, identifiers (ex. IP address)
- Children will not receive interest-based advertisements
- Adult users may revoke data collection permissions

## ROYBI Robot

- Records audio and video only during lesson
- ROYBI service collects personal information, but *currently* does not sell to third-parties
- Stored on AWS
- COPPA-compliant
- All video, audio, and password data is encrypted
- Adult users can access data and delete their accounts, all data will be deleted after 90 days as well

ID	Age	Children's Age(s)	Occupation	Familiarity with Technology (Self-reported)

O	N/A	N/A	More than 2 years	Yes
P	More than 2 years	Yes	More than 2 years	No

# Device Review

- Pros
  - Simple design, easy to use
  - Parental controls
  - Amazon's reputation
- Cons
  - Data collection
  - Spying, targeted advertising
  - Amazon's reputation

- Pros
  - Good for at-home learning, especially during the pandemic
  - Natural language processing and facial recognition features
- Cons
  - Bad design, doesn't feel friendly
  - Screen too small
  - Spying and facial recognition

Question	Disagree	Slightly Disagree	Slightly Agree	Agree
I have concerns for how my data is collected and stored on the Internet.	0	4	4	8
I find it important that collected data is kept private.	0	2	4	10
I thoroughly research into Internet-connected devices before making a purchase.	1	3	7	5
I am familiar with the Children's Online Privacy Protection Act (COPPA).	8	2	4	2

Security Concern	Count
Data Storage	10
Data Usage	6
Inappropriate Content	8
Privacy	12
Other	1
None	1

Dialogue Concerns	Count
Inappropriate Dialogue	4
Data Storage	4
How data is used	11
Privacy of Conversations	11
Other	0
None	4

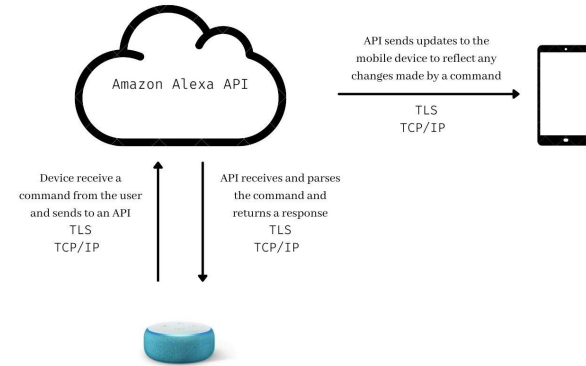

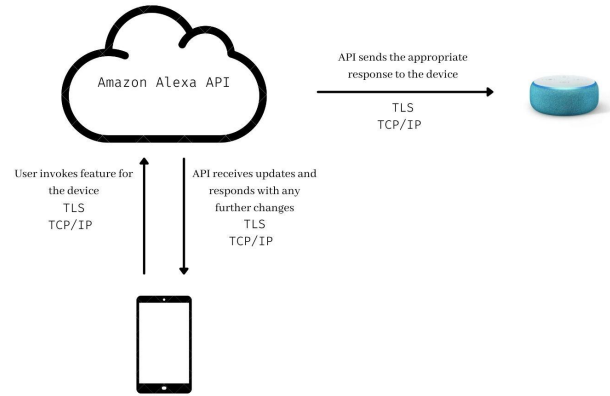

# Findings

- Participants in a technical occupation demonstrated a deeper understanding of data collection and privacy, while those who were not demonstrated otherwise
  - Consequently, those who have less of an understanding tend to follow fewer security practices
- Participants' expectation of the contents on privacy policies did not align with the actual contents
  - Did not know exactly what data is collected, when it is collected, and how they use it
- Product design plays a role in user expectations
  - Less trust for ROYBI due to crude design
  - More trust for Amazon due to the company's reputation

# Device Taxonomy

# Alexa FreeTime / Amazon Kids

- Allows parental controls for Alexa-enabled devices with FreeTime enabled
  - Helps manage Amazon Kids profiles
  - Set daily limits, add digital contents (e.g. e-books, apps, videos)
- Certain explicit phrases are not processed with FreeTime enabled
  - When mature content is requested, the device may either decline to answer or redirect the question to an adult
  - Requests containing explicit language is ignored
- Only kid-friendly Skills can be invoked with FreeTime enabled
  - Skills such as Spotify, The Washington Post, etc. are not available, as they contain contents that are inappropriate for children

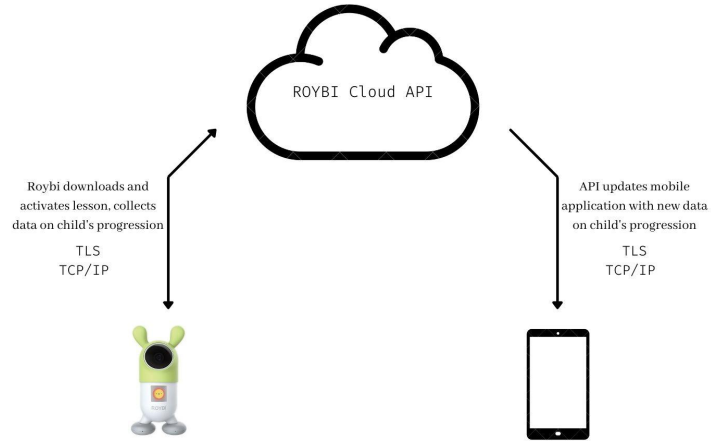

## Mobile application command

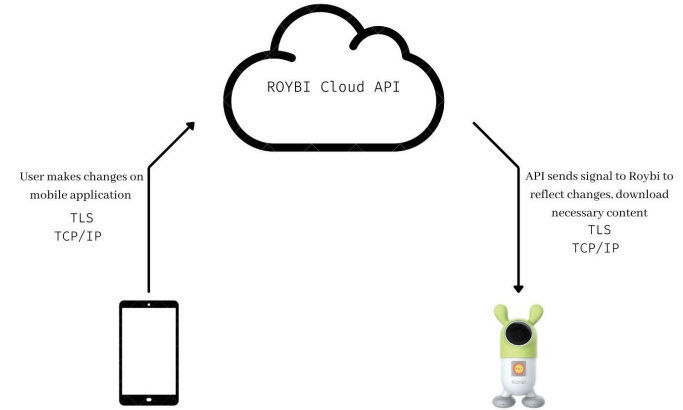

## Voice command

Feature	Mobile Endpoint	Device Endpoint
Call	device-metrics-us-2.amazon.com cmds-tachyon.com (STUN)	avs-alexa-14-na-amazon.com cmds-tachyon.com (UDP)

# Conclusion

# Recommendations for Developers

- Preventing automated attacks
  - Prevent password stuffing, brute force, and dictionary attacks by verifying the client
- Encrypt everything, secure everything!!
  - We, and prior research, have found insufficiently encrypted or secure systems
- Multi-factor authentication
  - Virtually unbreakable, but may be a hassle for users
- Data collection transparency
  - Most people in our survey did not know when, how, and where data is collected

# Future Work

- Diversify survey participants
  - Our participants were found through word of mouth and picked from an existing subject pool from the UCSC Baby Lab
  - Finding a wider diversity of participants helps us develop a better mental model
- Analyze more devices
  - Plenty of IoT devices available on the market, does not need to be a children's device
  - More industry examples helps up develop a better threat model
- In-person Interviews
  - This was the original plan, but had to be reconsidered due to the COVID-19 pandemic
  - Allows in-person interviews, and allows the children to play with the devices

# Questions and Comments
